School of Computer Science and Engineering

Internship Presentation

Campus Exchange

A Java Full Stack Web Application

Student Name	Anubhav Tripathi
Enrollment Number	_____
Program & Semester	B.Tech CSE — Batch 2026-27
Organization	EduSkills Academy (AICTE Internship)

About the Internship

An 8-week Virtual Internship under the **AICTE – EduSkills Virtual Internship Program**, in the domain of Java Full Stack Development.

Duration	June 2026 – August 2026
Domain	Java Full Stack Development
Organization	EduSkills Academy
Certificate ID	2026-0561786D09

Goal

Learn to build a complete website — front page to database — using simple, well-known technologies.

8

Weeks of structured learning

6

Technologies learned and applied

1

Final project built: Campus Exchange

1

Final Assessment Test completed

Organization Profile

EduSkills Academy

EduSkills Academy runs Virtual Internship Programs with AICTE, under the theme “Nation Building Through Skills.” It is ISO 9001:2015 and ISO 20000-1:2018 certified, and works through the AICTE National Internship Portal.

1

AICTE Partner

Runs programs under the AICTE National Internship Portal.

2

Quality Certified

ISO 9001:2015 and ISO 20000-1:2018 certified organization.

3

Multiple Domains

Offers internships in Java Full Stack, Cloud, AI, and Cybersecurity.

Problem Statement

The Problem

Students have items they no longer need — books, notes, gadgets. Other students want the same items, cheap. Right now this happens through messy WhatsApp groups or paper notices.

- Messages get buried and lost
- No way to search for an item
- Not everyone is in the same group
- No record of what's still available

The Solution

Campus Exchange — a simple, dedicated website made only for a college campus, where students can post items and easily find what they need.

- One place to see all listed items
- Search and browse easily
- Open to the whole campus
- Data saved safely in a database

Project Objectives

What I set out to learn and build during the internship

1

Learn HTML & CSS

Build and style the structure of web pages.

2

Learn JavaScript

Make web pages interactive and dynamic.

3

Learn Core Java

Understand the language used for the backend.

4

Learn Spring Boot

Build a working server for the application.

5

Learn MySQL

Store and manage application data safely.

6

Build Campus Exchange

Combine everything into one working project.

Technologies Used

Only six technologies — simple and easy to explain

Page structure

Styling & layout

Interactivity

Core programming language

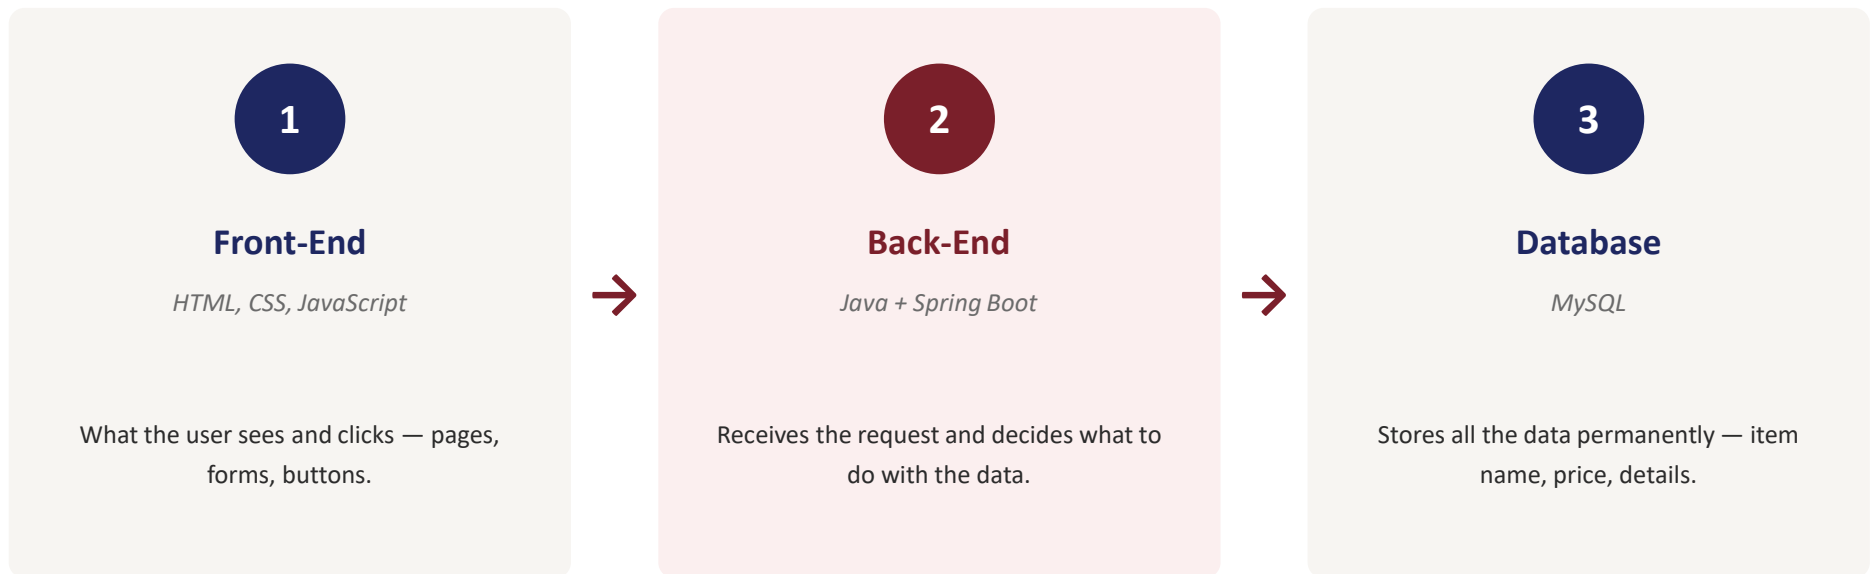

Backend server

Database storage

System Architecture

How the three parts of the project work together

User fills a form → Spring Boot server processes it → MySQL saves/reads the data → result shown back on the page

Methodology — Week by Week

1	HTML	Web page structure & forms
2	CSS	Styling & layout
3-4	JavaScript	Interactivity & validation
5	Core Java	Variables, loops, OOP basics
6	Advanced Java	Deeper backend concepts
7	Spring Boot	Building the server
8	MySQL	Connecting the database

Each week ended with a short assessment. In the final week, everything was combined to build Campus Exchange.

The Project — Campus Exchange

What it does

A simple website where a student can list an item to sell or exchange, and other students can browse and view all listed items.

- Add a new item with name, description, price
- View all items listed by other students
- Data is saved safely in MySQL
- Works on both desktop and mobile screens

The image displays two screenshots of the 'Campus Item Exchange' website interface.

Top Screenshot: Sell an Item

The page has a yellow background. At the top, there's a header with the site name 'Campus Item Exchange' and buttons for 'Buy' and 'Sell'. The main content area is a white box titled 'Sell an Item' with the subtitle 'List your unused items and exchange them with students on campus.' The form includes:

- A text input field for 'What are you listing?' with the example 'e.g. Java Programming Book'.
- Two dropdown menus for 'Category' and 'Condition', both with 'Choose one' as the selected option.
- A dropdown menu for 'Sale, trade or free?' with 'Choose one' selected.
- A text input field for 'Price in ₹ (0 for free trade)' with '0' entered.
- A text area for 'A short description' with the placeholder 'Describe your item...'.
- Two text input fields for 'Your name' and 'How should someone contact you?' (with 'Phone or email' as a placeholder).
- A text input field for 'Suggested campus meet-up spot' with the example 'e.g. College Library'.
- A red 'Publish Listing' button at the bottom.

Bottom Screenshot: Available Items

This page also has a yellow background and the same header. The main content area is a white box titled 'Available Items' with the subtitle 'Find items listed by students on campus.' It features:

- A search bar with the placeholder 'Search for an item...'.
- A message stating 'No items available' with the subtext 'No items have been listed for sale yet.'
- A red 'Sell an Item' button at the bottom.

What I Learned

Expected outcomes of the internship

Build a clean web page using HTML and CSS

Build a server using Spring Boot

Make a page interactive using JavaScript

Store and fetch data using MySQL

Write simple programs in Java

Built one complete project using all six skills together

Thank You

Questions are welcome
