

An Internship Report
Of
Java Full Stack Web Application

Submitted
To
School of Computer Science and Engineering
IILM University, Greater Noida, U.P.

In partial fulfilment of the requirement of degree of
B-Tech (CSE)

By

Roll Number of Student:- 2410030158
Name of Student: ANUBHAV TRIPATHI

Batch: 2026-27

CANDIDATE'S DECLARATION

I, Anubhav Tripathi, do hereby declare that the internship report titled “JAVA FULL STACK WEB APPLICATION” has been completed by me to fulfil the requirement for the award of the degree of Bachelor of Technology in Computer Science and Engineering. All the references have been quoted and I have not taken as such any material from any other source. I affirm that this report is my own and has not been submitted to any other institute for any degree/diploma requirement, and further I shall be solely responsible for any kind of copyright violation in this regard.

Signature:-

Student Name: **ANUBHAV TRIPATHI**

Roll No.: **2410030158**

ACKNOWLEDGEMENT

I am using this opportunity to express my gratitude to everyone who supported me throughout the Internship Program. I am thankful for their aspiring guidance, invaluable constructive criticism and friendly advice during this work. I am sincerely grateful to them for sharing their truthful and illuminating views on a number of issues related to this work.

I would like to thank the **AICTE – EduSkills Virtual Internship Program team and EduSkills Academy** for providing me the opportunity and the structured platform to learn and gain hands-on exposure in the domain of Java Full Stack Web Application. I am also thankful to my institute, IILM University, Greater Noida, and the faculty of the School of Computer Science and Engineering for their continuous support and encouragement.

I express my gratitude to my parents for their blessings.

Signature:

Student Name: **ANUBHAV TRIPATHI**

Roll No.: **2410030158**

3. INTERNSHIP COMPLETION CERTIFICATE

CERTIFICATE
OF INTERNSHIP

PRESENTED TO

Anubhav Tripathi

has successfully achieved the Internship Credential by completing a 8-week program in the domain of

Java Full Stack

During the internship, the learner demonstrated proficiency in:

- Introduction to HTML and Web Page Structure
- CSS Fundamentals for Web Design & Bootstrap: Responsive Web Design Framework
- JavaScript: Interactive Web Development & jQuery: Simplifying JavaScript Development
- Core Java: Fundamentals of Java Programming & Advanced Java: Enterprise Application Development
- Spring Framework: Enterprise Java Development
- Spring Boot: Simplifying Java Application Development
- Hibernate: Object-Relational Mapping in Java
- MySQL & Git & Version Control

This certification recognizes the successful completion of the internship requirements.

Issued on: Aug 09, 2026
Certificate ID: 2026-0561786D09

Internship Offer Letter

Ref No: C17Y2026M081520212

Internship Offer Letter

Student Name : Anubhav Tripathi
Stream : B.Tech
Branch : B.Tech(Computer Science and Engineering)
Institute Name : IILM University, Greater Noida
Internship Domain : Java Full Stack Developer
Internship Duration : June 2026 - August 2026
AICTE Student ID : STU6997f182298961771565442

We are pleased to inform you that you have been selected for the 8-Week **AICTE – EduSkills Virtual Internship Program**.

During this internship, you will learn and demonstrate industry-relevant skills that will enhance your employability and strengthen your confidence in the subject area.

The program is designed to provide structured learning combined with practical exposure.

Internship Structure & Evaluation:

- The internship will follow a **week-wise structured learning plan**.
- You will be required to complete **weekly assessments** to track your progress and understanding.
- Certain modules will require submission of **project documentation and assignments**.
- In the final week, you must appear for a **Final Assessment Test**.
- The final grade will be based on your overall performance, including weekly assessments, project submissions, and the final test.

Upon successful completion of all required steps and assessments, you will be awarded a **Virtual Internship Certificate**.

Please note that this offer letter will be considered valid only after the successful completion of the internship program and fulfillment of all assessment requirements, including obtaining the final completion certificate. Without the final completion certificate, this offer letter shall not be treated as a valid document for any official purpose.

The week wise Structure of the Internship is as Follows:

Week	Module	Description
Week 1	HTML	Learn HTML fundamentals including page structure, semantic elements, forms, tables, and building the foundation of web pages.
Week 2	CSS	Master CSS styling concepts including selectors, box model, positioning, flexbox, grid, and responsive web design.
Week 3	Bootstrap	Build responsive and mobile-first interfaces using Bootstrap components, grid system, and utility classes.
Week 4	JavaScript & jQuery	Learn JavaScript fundamentals, DOM manipulation, events, and interactive web applications.
Week 5	Core Java	Understand Java fundamentals including OOP concepts, collections, exception handling, and file handling.
Week 6	Advanced Java	Explore JDBC, Servlets, multithreading, and enterprise-level application development.
Week 7	Spring Framework & Spring Boot	Develop enterprise applications using Spring Boot, REST APIs, and dependency injection.
Week 8	Hibernate & MySQL + Git & Version Control	Learn ORM concepts using Hibernate and integrate MySQL database for CRUD operations.
Internship Grade Point Assessment		

Note: There is no stipend associated with this internship.

We congratulate you on your selection and wish you a successful learning journey.

4. PROJECT DESCRIPTION

4.1 Introduction

This report explains the 8-week Virtual Internship that I completed under the AICTE – EduSkills Virtual Internship Program, in the domain of **Java Full Stack Development**. The internship ran from June 2026 to August 2026, as part of my B.Tech (CSE) course at IILM University, Greater Noida.

The goal of this internship was simple: learn how to build a complete website from start to end. This means learning both the part that a user sees (the front-end) and the part that works behind the scenes to store and manage information (the back-end). "Full stack" simply means knowing both sides — front and back — well enough to build a working project alone.

During the 8 weeks, I learned how to write web pages using **HTML, CSS, and JavaScript**, and how to build a server and connect it to a database using **Java, Spring Boot, and MySQL**. Using all these skills together, I built a project called **Campus Exchange** — a simple website where students can list items they want to sell or exchange, and other students can view those items.

This report explains, in simple words, what the internship covered, what problem my project solves, how it was built, and what I learned by the end of it.

4.2 Organization Profile

EduSkills Academy is the organization that ran this internship program. It is an ISO 9001:2015 and ISO 20000-1:2018 certified organization, which means it follows proper quality and service standards. EduSkills works under the theme "**Nation Building Through Skills**", and it partners with **AICTE (All India Council for Technical Education)** to run Virtual Internship Programs through the AICTE National Internship Portal.

EduSkills offers internships in many fields such as Java Full Stack Development, Cloud Computing, Artificial Intelligence, and Cybersecurity. The main purpose of these internships is to help engineering students like me learn practical, job-ready skills that are not always taught in regular college classes, so that we are better prepared for real jobs after graduation.

4.3 Problem Statement

On most college campuses, students have items they no longer need — old books, notes, calculators, gadgets, or hostel items — while other students are looking to buy the exact same things at a cheaper price. Right now, most of this buying and selling happens through informal ways, like WhatsApp groups or paper notices on a board.

These informal ways have many problems:

- Messages in WhatsApp groups get buried and lost quickly.
- There is no way to search for a specific item.
- Not every student is part of the same group, so many people miss out.
- There is no proper record of what is available and what is already sold.

Because of these problems, there is a need for a simple, dedicated website — made only for a college campus — where students can post items and easily find what they are looking for. This is exactly the problem that my project, Campus Exchange, tries to solve.

4.4 Project Objectives

The main objectives of this internship and project were:

- To learn HTML and use it to create the basic structure of web pages.
- To learn CSS and use it to make those web pages look neat and attractive.
- To learn JavaScript and use it to make the web pages interactive (for example, showing messages, checking forms).
- To learn Core Java, which is the base language used for building the back-end.
- To learn Spring Boot and use it to build a working server for the application.
- To learn MySQL and use it to store all the data of the application safely.
- To combine all these skills into one final project, Campus Exchange, that works as a complete website — from the front page to the database.

4.5 Scope of the Project

In this project, a student can open the website, see a list of items that are available, and add a new item they want to sell or exchange, with details like the item name, description, and price. All this information is saved in a MySQL database through a Java Spring Boot server, so it does not disappear when the page is refreshed or closed.

This version of the project is kept simple on purpose. It does not include things like online payment, chat between buyer and seller, or login with password. These features can be added later. The main focus of this version is to correctly use and connect the six technologies learned during the internship: HTML, CSS, JavaScript, Java, Spring Boot, and MySQL.

4.6 Technologies and Tools Used

This project uses only a small, simple set of technologies, which makes it easy to explain to anyone:

- HTML – used to create the structure of the web pages (headings, forms, buttons, tables).
- CSS – used to style the web pages and make them look clean and organized.
- JavaScript – used to add interactivity to the pages, like validating a form before it is submitted.
- Java – the main programming language used to write the logic of the application.
- Spring Boot – a Java framework used to quickly build the server (back-end) of the application.
- MySQL – the database used to store all the information, like the list of items added by students.
- Maven – a tool that helps in building and running the Java project easily.

4.7 System Architecture

The architecture of this project is simple and can be explained in three parts:

1. Front-End (HTML, CSS, JavaScript) This is the part the user directly sees and interacts with in the browser. It includes the home page, the form to add a new item, and the page that shows the list of items. HTML gives the structure, CSS gives the styling, and JavaScript adds small interactive behaviors, like checking if a form field is empty before submitting.
2. Back-End (Java + Spring Boot) This is the part that works behind the scenes. When a user submits a form (for example, adding a new item), the browser sends this

information to the Spring Boot server. Spring Boot receives the request, checks it, and decides what to do with the data — in this case, saving it to the database.

3. Database (MySQL) This is where all the data is permanently stored. Every item added by a student — its name, description, and price — is saved as a row in a MySQL table. When someone visits the website again, Spring Boot fetches this data from MySQL and sends it back to be shown on the web page.

In simple words, the flow is: User fills a form on the web page (HTML/CSS/JS) → data is sent to the Java Spring Boot server → Spring Boot saves or fetches data from the MySQL database → the result is sent back and shown on the web page.

4.8 Methodology

The internship was divided into weekly modules. Each week focused on one topic, moving step by step from simple front-end basics to a complete back-end project. This made it easy to build knowledge slowly instead of learning everything at once.

Week	Topic	What I Learned
1	HTML	How to create the basic structure of a web page — headings, paragraphs, forms, tables, and links.
2	CSS	How to style a web page — colors, fonts, spacing, and simple layouts.
3–4	JavaScript	How to make a web page interactive — for example, showing alerts, checking form input, and changing content without reloading the page.
5	Core Java	The basics of Java programming — variables, loops, conditions, classes, and objects.
6	Advanced Java	Slightly deeper Java concepts that are useful for building back-end applications.
7	Spring Boot	How to use Spring Boot to build a simple server that can receive and respond to requests from a web page.
8	MySQL	How to create a database, create tables, and connect the Spring Boot application to MySQL to save and read data.

Every week ended with a small assessment to check understanding of that week's topic. In the final week, I combined everything learned so far to build the Campus Exchange

project — a working website where the HTML/CSS/JS front-end talks to a Java Spring Boot back-end, which stores and reads data using MySQL.

4.9 Expected Outcomes

By the end of this internship, I was able to achieve the following:

- I can build a simple, good-looking web page using HTML and CSS.
- I can make a web page interactive using JavaScript.
- I understand the basics of Java programming and can write simple Java programs.
- I can use Spring Boot to build a working server that connects to a database.
- I can use MySQL to store, save, and read data for an application.
- I have built one complete project (Campus Exchange) that uses all these six technologies together, which I can confidently explain and demonstrate to teachers or in an interview.
- I now understand, in a practical way, how a real website works from the moment a user opens it to the moment their data is saved and shown back to them.

4.10 Certificates of Completion and Communication Proof

The Internship Offer Letter and the Internship Completion Certificate issued by EduSkills Academy, confirming successful completion of the 10-weeks AICTE – EduSkills Virtual Internship Program in JAVA FULL STACK WEB APPLICATION, are attached in Chapter 3 of this report.
